

MATERIALS MANAGEMENT

ERP for Real Estate and Infrastructure Companies

Far Vision Materials Management manages some critical functions of an organisation, which include materials procurement or purchase order processing, inventory control, materials valuation and sub-contracting

Materials Management is integrated with the following modules

- Financials
- Real Estate
- Infrastructure

Objectives and Advantages

- Capturing materials requirement
- Creating and processing purchase orders
- Monitoring purchase orders
- Receiving goods in the warehouse
- Verifying accuracy and validity of purchase invoices against orders and goods received

The Far VisionEdge: Features and Highlights

- It allows the inventory to be measured in a number of units, with immediate conversion between units. Besides this, trace of each raw material can be kept in multiple units of stocking
- It allows the inventory to be kept at several locations within the organisation. This enables multi-warehouse stock handling
- Occurrence of extra charges like freight inwards and assigning them against purchases
- Physical stock verification and adjustment of differences

Far VisionMaterials Management: A closer look
